

Helping everyone towards a greener planet

We all have a responsibility

Our world is changing, never before has it been so important to be responsible and for us to do what we can to look after it. We all want to have healthy and enjoyable lives, but this is not just about the here and now, it's our responsibility to help safeguard the future. Now is the time to do what we can in business, and as individuals.

Do we have a choice?

As an example, within the UK the Medium Combustion Plant Directive (MCPD), defines strict emissions criteria for industrial equipment with a thermal output between 1 MWth - 50 MWth. Existing legacy equipment will need to comply to the emissions limit or will have to have derogated operations limited to 500 hours per annum.

Every existing installation (1 MWth - < 5 MWth) will need an environmental permit to retain full time operations, after the deadline of 1st January 2030.

Every existing installation (5 MWth - 50 MWth) will need an environmental permit to retain full time operations, after the deadline of 1st January 2025.

But this is not just about legislation, we have moral responsibility to help reduce the global carbon footprint deadline of 2024, depending on the equipment output.

Let's do this together, and work to have a healthier environment.

Greenray can help you

GTSL have been working to produce a programme of services, that can help you, to meet your environmental responsibilities as a business.

Our programme is split into 3 levels, to meet your needs.

Level 1. Review Installation and Operational Requirements

Level 2. Data Analysis, Production Emissions and Performance Curves

Level 3. Site Implement and Verification of Derogation
