

# Floating Production Storage and Offloading Vessel (FPSO) Support Services

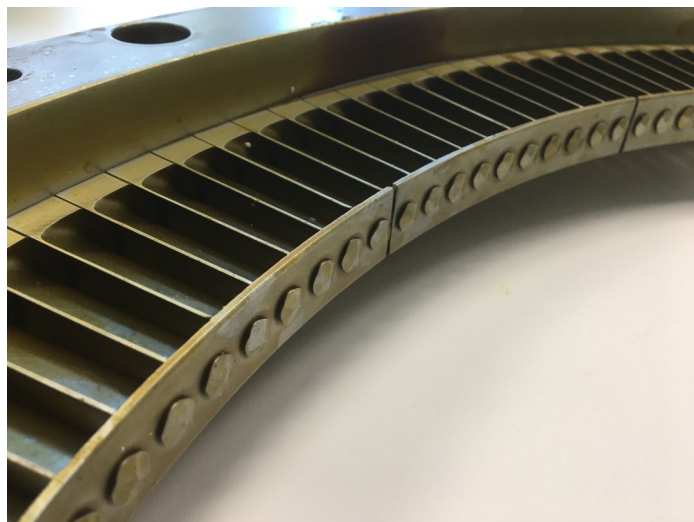

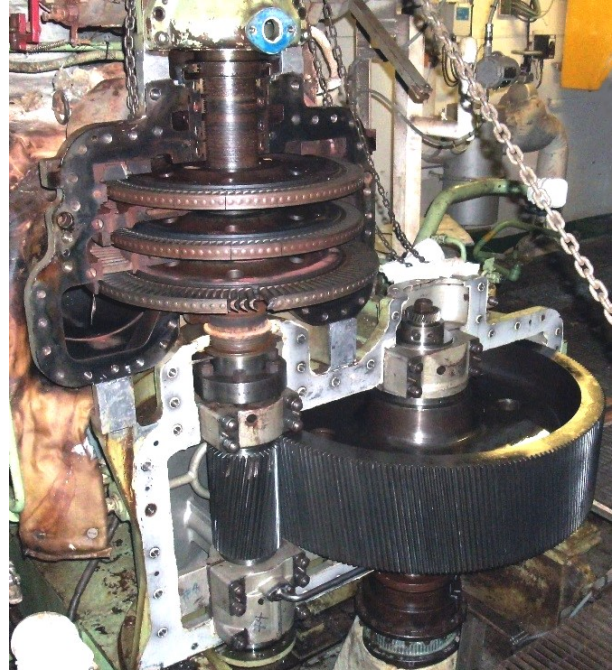

## Customer Focus

Greenray Turbine Solutions are an independent service provider, we are not affiliated to any specific product, supplier or manufacturer.

This gives us the flexibility to provide a cost effective, customer focused service to critical small rotating equipment onboard FPSO vessels; onboard maintenance work, call-off contracts, alternative engineered solutions for spare parts, spare part stock holding, and de-risking of critical small rotating equipment.

## Innovative Business

Where spare parts are not available or a repair is not possible onboard, Greenray Turbine Solutions can offer advanced engineering, using alternative engineered solutions. Greenray can carry out plant condition monitoring and vibration analysis, along with technical consultancy and operator training, as required.

## Excellent Safety Record

Our team have an excellent safety record, working on a wide variety of critical small rotating equipment onboard FPSO vessels. We pride ourselves on meeting all necessary compliances.

## Demonstratable Capability and Deliverability

We have proven capability and deliverability working on FPSO Turbo-Feed Pumps, Inert Gas Blowers and Turbine Drives, Forced Draft Fans and Turbine Drives, Turbo Off-Loading Pumps, Steam Driven Stripping Pumps, and Main Steam Turbo Generators.

Greenray Turbine Solutions also have a demonstratable capability to deliver spare parts by alternative engineered solutions, such as the complete manufacture of an FD fan steam turbine drive rotor and reversing segment.
