

Modular Controls Upgrades

Upgrading - The modular way

Focused improvements

We know that there are times when a full upgrade is just not practical due to extended downtime or the expense of a major upgrade. That's why we have developed our modular upgrade system, to help you keep in control of expenditure and enable focused improvements to asset life, by only addressing the areas necessary. This has the advantage of reducing costs and disruption to site operations.

We can help you keep your engine running, enhance operability and give you many more years of service.

What we do

Our modular systems are designed to integrate with your existing control system to minimise downtime and cost. We implement control system modernisation and life-extension upgrades for customers around the world, increasing availability and reliability, whilst simplifying operation and reducing maintenance costs.

Helping you to upgrade,
piece by piece.

What we offer:

- Hydraulic and Lub Oil Modules
- Fuel systems and governors
- Fire & Gas systems
- Vibration monitoring systems
- Overspeed protection
- Temperature monitoring

Help beyond modular system products

Our expertise is not limited to modular upgrades. When you are ready, we can offer tailored systems to suite you and complete upgrades.

We can also supply package system replacements such as fully instrumented fuel systems, driven unit control systems, and much more.

Our solutions are built using commercially available off the shelf hardware, giving you longevity, confidence, and performance when you need it most.

The next step

Finding out more is easy, contact us, and we'll give you a dedicated response.
