

On-site Repair and Overhaul

The repairs you need; to the standard you expect

How we can help

If not regularly and routinely maintained, turbomachinery can become unreliable which could lead to significant repair costs. That's why we've trained and equipped our Field Service Engineers to give you a first-class service. We aim to minimise downtime, optimise reliability and manage costs to suit your operational needs.

Unrivalled knowledge and resources

As the OEM for the GEC Legacy fleet, we have the knowledge and resources to provide the repairs you need and the overhaul standards you expect on-site. In addition to the GEC fleet, we work with all major manufacturers of gas turbines, including:

- GEC
- Alstom
- Siemens
- Dresser Rand
- Ruston
- EGT
- English Electric
- Associated Electrical Industries

We diagnose the problem, find the solution and carry out the repair or overhaul on-site. If needed, we can continue works at one of our extensive repair facilities.

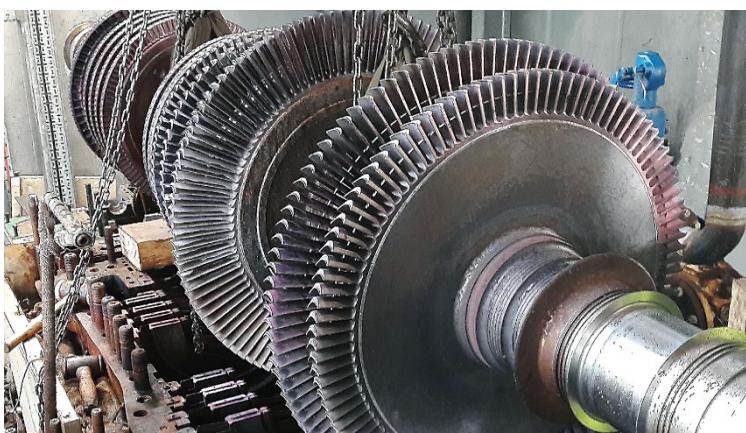

Professional repairs

We work on gas turbine package elements, including:

- Power Turbine Rotors and Nozzles
- Power Turbine Discs and Bearings
- Inlet, Outlet and Transition Ducts
- Control Systems
- Fuel and Oil Systems

The next step

Finding out more is easy, contact us, and we'll give you a dedicated response.

Repair and overhaul on-site, for your package.
