

Turbine Package Health Checks

Keeping your package - Production ready

Helping you to foresee the future

The health of your turbine package is an early indicator of potential problems just waiting to happen. With the pressure to maintain production always paramount, it is easy to lose sight of just how the turbine package is performing or when early warnings of failure are visible.

Small work arounds tend to get forgotten and can eventually become expensive production stoppers, resulting in excessive downtime and unnecessary expenditure. Asset Integrity and reliable operation of your gas turbine plant is not just related to scheduled servicing of the turbine.

Cost effective solutions

We are on hand with cost effective solutions to give you peace of mind and the confidence to know when maintenance or repairs are needed. Our comprehensive health checks ensure that minor faults are found, so work can be carried out to fix the problems before they cause harm to your engine.

Cost-effective checks,
to keep your package healthy.

Analysing the whole package

Faults affecting reliability and stable operation often result from deficiencies that originate outside of the core engine. These can often be avoided and can be identified by the use of package health checks. Think of it as a physical for your turbine installation.

What's included in package health checks?

Our checks cover many elements designed to help keep your package running efficiently and at optimal performance, such as key points often overlooked during servicing which include:

- Identify re-occurring issues
- Check running logs for increased trends
- Package auxiliary overview
- Inspect package ventilation and filters
- Check exhaust system lagging integrity
- Inspect enclosure integrity
- Check for premature seal failure to fuel & oil ways
- Check package security of attachment
- Control and HMI system functionality

Finding out more is easy, contact us, and we'll give you a dedicated response.
